

DIY Christmas Bauble Wreath with Christmas Balls on wire hanger

Supplies you may need:

- 1 wire coat hanger
- Christmas balls
- Glue
- Pliers
- Foliage, Christmas ribbon,

Bend the hanger into a circle. Using a little hot glue secure the metal cap to the bauble. (Strictly speaking you don't have to do this unless the caps are loose but it will give a more secure result).

Next untwist the end of the hanger and feed the baubles on to the wire one at a time. Alternate colours and use smaller sizes to fill in the gaps.

You can use a little glue to keep the baubles in position but it works just as well without and will allow you to reuse the baubles on your tree another year.

Cover the hook of the wire hanger with wide ribbon and it's ready to go. Best to hang this indoors or in a porch as it won't be weather proof.
